Uterine Fibroids are a **common health issue** that many women face. TRUST

Dr. Kevin Carson

Dr. Carson, co-founder of Georgia Vascular Institute, was inspired to pursue a career in medicine after witnessing the dire healthcare needs in his community and the women in his family battling uterine fibroids. With a medical degree from Temple University and specialized training in Cardiovascular and Interventional Radiology from Columbia University, Dr. Carson became one of the first doctors to perform the non-surgical breakthrough Uterine Fibroid Embolization procedure in the Southern Crescent.

UTERINE FIBROID EMBOLIZATION (UFE)

UFE IS A SAFE AND EFFECTIVE ALTERNATIVE TO SURGICAL PROCEDURES FOR THE TREATMENT OF UTERINE FIBROIDS.

TREATMENT & RELIEF

A minimally invasive medical procedure used to treat uterine fibroids.

PREPPING FOR THE PROCEDURE

Before the procedure, you may need to fast overnight and discuss any medications you are taking with Dr. Carson or staff.

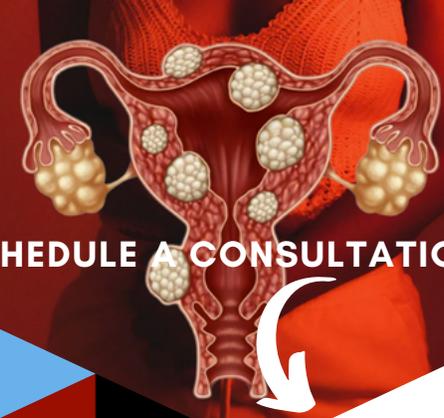

DURING THE PROCEDURE

During the procedure, you will be given sedation and a local anesthetic to numb the area. Our radiologist inserts a thin catheter through a small incision in the groin and guides it to the uterine arteries that supply blood to the fibroids. Once the catheter is in place, small particles are injected to block the blood flow to the fibroids, causing them to shrink and die off.

PROCEDURE AFTERCARE

After the procedure, you may experience cramping very similar to labor pains. Recovery assistance is available at all times from Dr. Carson and staff.

THE BENEFITS

AN EFFECTIVE ALTERNATIVE TO SURGICAL PROCEDURES FOR UTERINE FIBROIDS!

A UFE is a **minimally invasive** procedure that involves only a **small incision** in the groin, allowing for a **shorter and less painful recovery time** along with **reduced risk of complications**.

Additionally, **UFE preserves the uterus**, making it a viable option for women who wish to have children in the future.
